

A20 Omega Telephone Headset Amplifier

Description:

The A20 Omega Telephone Headset Amplifier can be summed up in one word - compatibility. This telephone amplifier is probably the most compatible in its class. It is completely suitable with both fixed-line phones as well as PC VoIP applications. It is ideal for anyone who uses a variety of different headsets but wants to control from a single point. It comes with a wealth of features to service all your amplifier needs such as a unique microphone-type selector that allows you to indicate the type of microphone being used. Once the microphone has been selected the amplifier will cleverly work out how to create the best output from the selected microphone input. This feature, combined with a brimful of extra features, make this headset amplifier an unquestionable purchase for your telecoms needs.

The amplifier also has online and mute status LED indicators that will allow you to easily see whether the headset is muted or whether the amplifier is online, a simple but extremely useful feature. There is a quick switch button so you can toggle between the phone handset or the headset. There's also a specially designed headset hanger to rest your headset on out of the way when it's not being used.

Features:

- suitable for both fixed-line phones and PC VoIP applications
- microphone-type selector
- online and mute status LED indicators
- quick switch button
- specially designed headset hanger
- fully CE, UL and FCC approved
