

Accutone - USB500 Skype Headset

USB Headset with Skype Interactive Control (VoIP Headset with Active Controller)

Description:

The USB500 USB VoIP model is a high-end interactive USB headset for Skype and general PC audio use.

Designed with frequent users of Skype in mind, the headset is able to activate Skype software through the headset controller. This Skype-activating inline digital controller is also able to control volume and muting straight from the headset and features a Skype-call answering button so that users can answer incoming phone calls with one simple click.

The quality of this product is in-line with all Accutone products and USB500 USB headset is a stylish and sharp looking model design. The lightweight aluminium voice tube is rotatable and supports a noise-cancelling microphone. In addition to this, the binaural headset includes specialised 40mm bass-enhanced speakers for powerful stereo output. Such applications are usually included in top-of-the-range call centre headsets and further enhance the audio clarity of the phone call and the overall calling experience.

To ensure user convenience, the USB500 USB VoIP headset contain LED indication for both online and muting status and the product package includes multi-featured software and drivers compatible with all popular operating services. This easy to install USB headset is therefore, a perfect product for personal use at home.
